- Processor: Intel® Pentium 4
- OS: Microsoft® Windows® XP with Service Pack 2 or Windows Vista™ Home Premium, Business, Ultimate, or Enterprise Edition
- RAM: 768 MB (1 GB Recommended)
- Hard Disk: 1 GB of available hard-disk space
- Media: CD-ROM drive
- Display: 1024 x 768 Monitor Resolution

Macintosh

- Processor: PowerPC® G4, G5, or Intel-based Mac
- OS: Mac OS X 10.4
- RAM: 768 MB (1 GB Recommended)
- Hard Disk: 1 GB of available hard-disk space
- Media: CD-ROM drive
- Display: 1024 x 768 Monitor Resolution

Install your software

1. For computers with Lightroom currently installed:
 - Download the Lightroom 1.3 update from Adobe.com. (<http://www.adobe.com/downloads/updates/>)
 - Open the folder and double-click Adobe Photoshop Lightroom (Windows or Mac OS), and then follow the on-screen instructions.

2. For computers without a previous version of Lightroom installed:
 - The latest version of Lightroom is available for download on Adobe.com. There is no need to install Lightroom 1.0 before updating to Lightroom 1.3. Please download the latest available Lightroom 1.3 version and proceed with the following installation. (<http://www.adobe.com/downloads/updates/>)
 - Open the folder and double-click Adobe Photoshop Lightroom (Windows or Mac OS), and then follow the on-screen instructions.

Serial Numbers

1. You can find the 24-digit serial number (e.g. 0000 0000 0000 0000 0000 0000) on the back cover of your CD holder. Online or Electronic Software Delivery(ESD) customers and those who purchased from a Tryout CD will find the serial number both on the receipt page from the online store, and in the e-mail confirmation you received. You will be asked for this number when installing Photoshop Lightroom.
2. If your new 24-digit serial number does not work, please contact Adobe Customer Service at 800-833-6687 for assistance. For those outside North America, please contact Adobe Customer Service in your region for assistance.

- All video files, specifically those acquired by digital still cameras

New in Lightroom 1.3

Lightroom 1.3 includes corrections for the following issues:

- The preference to write XMP metadata automatically has been corrected for performance issues
- Printing with the native resolution option enabled no longer sets the wrong dimension for portrait oriented images
- Prior to Camera Raw 4.3 there was the possibility that artifacts in edge transitions could be introduced through the Bayer demosaic and luminance noise reductions algorithms. This has been corrected.
- The Canon sRAW format and the Fuji compressed RAF formats are now supported.

Lightroom 1.3 includes the following enhancements:

- The import dialog now offers the option to render 1:1 preview as part of the import process
- The export dialog layout has been enhanced
- A Lightroom Preview Export SDK is available for developers to create and distribute Export Plug-ins. Further details are located on [Adobe Labs](#)

Working with Lightroom 1.3 and Adobe Photoshop Camera Raw

Lightroom and Photoshop Camera Raw share the same image processing technology to ensure consistent and compatible results across applications that support raw processing. These applications include Photoshop CS3, Photoshop Elements 4.01 for Mac, Photoshop Elements 6.0 and Premiere Elements 3.0 for Windows.

Photoshop Camera Raw 4.3

Adobe applications must be updated with the Camera Raw 4.3 plug-in in order to ensure compatibility with Lightroom 1.3 develop module settings. Photoshop CS3 users can update the Camera Raw plug-in automatically using the Update tool listed under the Help menu. The Camera Raw 4.3 plug-in can also be downloaded and installed manually by visiting the Adobe web site: www.adobe.com/products/photoshop/cameraraw.html. Please follow the installation instruction carefully.

Sharing Lightroom Settings with Camera Raw 4.3

By default, Lightroom's develop module settings are stored in Lightroom's database. In order to ensure that Lightroom develop settings can be viewed by Camera Raw 4.3 the settings must be written to the XMP metadata block for that file. This metadata is stored in an XMP sidecar file (Imagename.xmp) in the current image directory of proprietary raw files or stored directly within DNG files. To update images with the latest develop settings, choose the library module and select the group of target images. Choose the shortcut Command(Ctrl) + S to save the settings to the XMP metadata block.

Viewing Lightroom settings in Camera Raw 4.3

Before working in conjunction with Lightroom and Camera Raw please set the Camera Raw preference to: Save image settings in: Sidecar ".xmp" files. By default Camera Raw will display the image adjustments exactly as performed in Lightroom's develop module.

Viewing Camera Raw settings in Lightroom

Raw files edited by previous versions of Camera Raw will maintain their previous appearance when imported into Lightroom. Note: Those files must have been edited with the preference set to Save image settings in: Sidecar “.xmp” files in order for Lightroom to respect the previous edit. Files edited in Camera Raw after importation into Lightroom can be updated in Lightroom by choosing the “Read Metadata from Files ” from the Metadata file menu. Note: This menu option is only available in the Lightroom Library.

Additional Notes on Camera Raw and Lightroom

- Camera Raw will only read the current settings for the primary image in the Lightroom Library. Virtual Copy adjustments and Snapshot adjustments will not be displayed or available in Camera Raw 4.3
